

Unterschied Joan 6 und Joan 13

Joan enables transparent asset booking by displaying meeting room reservations at the conference room door or wall. It also offers functionalities for an easier overview of room capacities, team availability, and desk booking.

Currently, Joan products are available in the following models:

- **Joan 6** - For meeting rooms, huddle spaces, desks, office pods.
- **Joan 13** - For large conference rooms, boardrooms, lobbies.

All Joan devices operate as E Ink® displays with a 16-level grayscale, and a refresh rate of 750 ms (4-bit fullscreen)/100 ms (1-bit partial), and have *extremely* long battery life.

While the Joan devices have the same display technology, each model is unique and serves different purposes based on your preferences. Please find the comparison of the characteristics in the table below:
